

HSE Performance

At Kuwait Drilling Company, our HSE performance shows positive progress, reflecting the strength of our integrated management systems and commitment to ongoing improvement. Over the past year, we have seen steady reductions in recordable incidents and environmental impacts, supported by regular audits, leadership involvement, and workforce engagement initiatives. Training programmes, behavioural safety campaigns, and risk management efforts continue to build workforce competency and resilience across our operations. Our efforts are also reflected in certifications such as ISO 45001 and recognition through ASSP awards. Health, safety, and environmental performance remain a key focus for us, and we are committed to strengthening a culture of safety, sustainability, and accountability at all levels of the organisation.

We continue to have a steady decline in recordable incidents over the past 4 years. Motor vehicle incidents remain steady, but with the recent implementation of the Journey Management Plan and Journey Management Controllers, the focus is being brought back on motor vehicle incidents.
